

# HylaMax

The **#1**

**#1** for growth performance

**#1** for viability

**#1** for feed conversation ratio

The perfect balance between prolificacy & viability

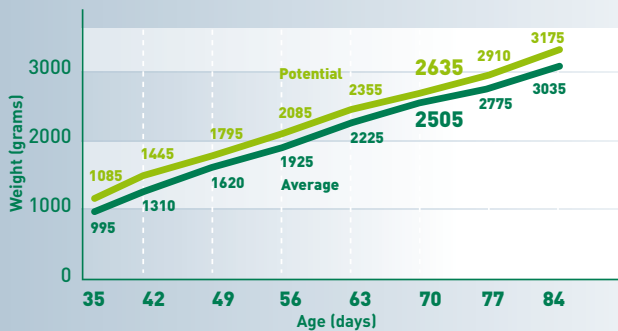

# HylaMax

The **#1**

Selected on its performances in terms of carcass yield and growth, HylaMax male rabbit is the ideal mate for your females in order to obtain heavy young rabbits to sell. Its offspring proves to be of a heavy weight already at weaning. The viability of its products will provide you with *a maximized weight of meat to sell to slaughterhouses, and a high gross benefit from artificial inseminations.*

## #1 for growth performance

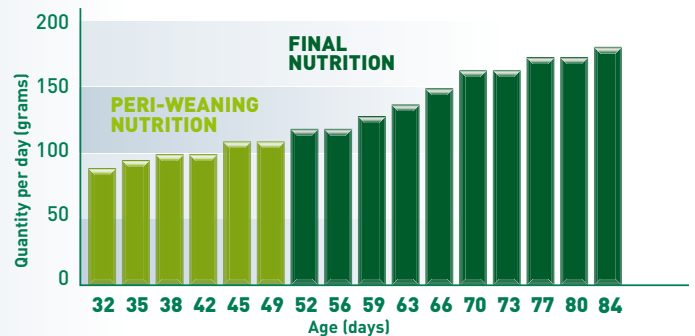

GROWTH CHART FOR FINAL HYLA PRODUCT

Heavier by **27gr** in average at **70** days old.  
It means **1** day gained on age of sale to slaughterhouses

## #1 for feed conversion ratio

A SIMPLIFIED FEED SCHEME FOR IMPROVED EFFICIENCY

**-0,13** on feed conversion ratio for the final product

## #1 for viability

More rabbits sold per artificial insemination:

**+2,7%** viability rate in the nest

**+2,2%** viability rate during growing and fattening period

HylaMax semen is available from our insemination lab and centre and our authorized dealers.

**Carcass yield:**

**57%**  
**~ 59%**

**Weight of a rabbit kit after weaning:**

**995g**  
**~ 1090g**

**Weight of a 70-day-old rabbit:**

**2505g**  
**~ 2635g**
